

Sample Report Template

A Demonstration of a Professional LaTeX Report

Your Name

Graduate Student, Department of Mathematics

October 9, 2025

Contents

Chapter 1

Introduction

This report provides an example structure for writing technical or research reports in \LaTeX . It demonstrates common environments such as equations, figures, and references.

1.1 Motivation

Mathematical and computational reports often benefit from clear structure and consistent formatting. This template aims to provide both.

1.2 Background

You can cite references using `biblatex`, such as Einstein's work on relativity [`einstein1905`].

Chapter 2

Mathematical Framework

2.1 Equations

Equations can be displayed inline, e.g. $E = mc^2$, or in display mode:

$$\nabla^2\psi + k^2\psi = 0 \tag{2.1}$$

You can reference Equation ?? later.

2.2 Definitions and Theorems

A *topological space* is a set X together with a collection τ of subsets of X satisfying the topology axioms.

Let $f : X \rightarrow Y$ be continuous. If X is compact, then $f(X)$ is compact.

Proof. Let $\{V_i\}$ be an open cover of $f(X)$. Then $\{f^{-1}(V_i)\}$ is an open cover of X , which has a finite subcover by compactness. \square

Chapter 3

Figures and Tables

3.1 Figures

You can include figures as shown in Figure ??.

Figure 3.1: Example figure with a caption.

3.2 Tables

Table 3.1: Sample data table

Variable	Mean	Std. Dev.
x_1	1.23	0.12
x_2	4.56	0.45
x_3	7.89	0.78

Chapter 4

Discussion

Discuss your results, implications, and future work here. For example, in quantum computing contexts, one might describe how tensor product structures extend computational models.

Chapter 5

Conclusion

Summarize the key findings or methods. You might include:

- Theoretical insights or results.
- Implementation details.
- Open questions or future directions.

Appendix A

Appendix A: Additional Material

Appendices can include code listings, proofs, or detailed data.
